Re: Letter of Recommendation for Sloan Louden-Robins

To Whom It May Concern,

It is my pleasure to recommend Sloan Louden-Robins for employment in your organization. I had the privilege of working with Sloan during her time as an undergraduate researcher in the TXST Space Lab at Texas State University, where I serve as a faculty supervisor. Our lab focuses on space technology development, and Sloan played an integral role in one of our ongoing projects, a sensor array designed for high-altitude balloon missions that monitor atmospheric conditions.

Sloan's contributions to this project were outstanding. She took on key responsibilities, including designing printed circuit boards (PCBs) and structural housing for the sensor array, as well as developing the embedded code for the microprocessor that coordinated sensor data collection. Sloan consistently demonstrated excellent problem-solving skills, especially in the testing and troubleshooting phase of the project. Her ability to identify system issues, implement solutions, and document processes clearly made her a vital member of the project team.

Beyond her technical talents, Sloan brought a strong work ethic and genuine dedication to the success of the project. She approached challenges with patience, persistence, and curiosity, qualities that are invaluable in both research and industry environments. Her professionalism and reliability made her a trusted collaborator, and I have full confidence that she will bring the same level of commitment to any position she pursues.

I wholeheartedly recommend Sloan Louden-Robins for employment. She is a capable, disciplined, and resourceful individual who would be an asset to any technical or engineering team. Please feel free to contact me if further information is needed.

Sincerely,

Evan Jellison
